SUMMARY:

Excited to start a new career as a full stack developer. I am passionate in application development and enthusiastic about new technologies. Working together with team members is the most important as a software developer.

TECHNICAL SKILLS

Frontend skills:

• HTML5	• CSS
• JavaScript	• jQuery
• Bootstrap	• React

Backend skills:

• Node.js	• Express
• Handlebars/EJS	• MySQL/MongoDB
•	• Mongoose

Other skills:

• GitHub
• Searching with google
• Reading docs and online examples
• Problem solving

PROJECT INVOLVED

1. Simple Management System

This is a MERN stack application for small cleaning business owner. It can manage client and cleaner information (add and delete), jobs status (add, delete, assign to cleaner).

Backend stack: Node.js, Express.js, MongoDB

Frontend stack: React.js, Firebase authentication, Ant Design framework.

2. Public Holiday Checker

A pure frontend application wrote by HTML5, CSS, jQuery. Worked with other two group members. My duties are render the result in display section and using modal to show holiday info.

GitHub page: <https://github.com/HengquanLi/Public-Holiday-Checker>

3. Wish list

I work with other three team members. My jobs are designing the sequelize module to initialize SQL server database, coding the wish-list data api and html routes, setting up the handlebars for display data, writing frontend script for sending request calls to the server, and deploying all code on Heroku.
